Editing GSP Coordination

This feature is to edit GSP coordination on the Map window. This feature has difference with previous data panning. If performs data panning with data selection, only the selected data will be moved. If performs data panning without data selection, map will be changed applying offset to x,y axis for total route in the same with previous data panning.

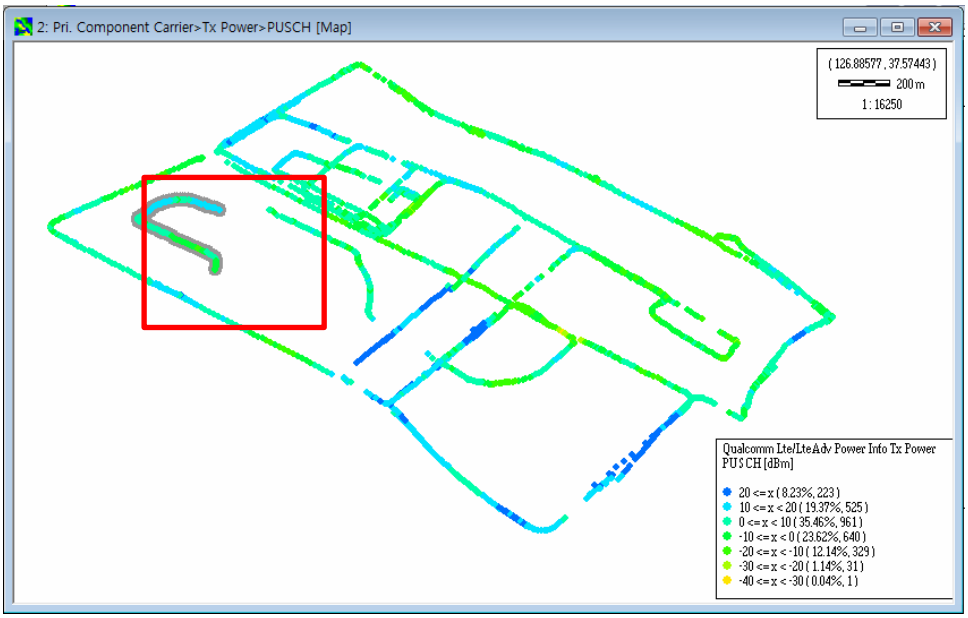

Procedure to use edit GSP coordination feature is as shown below.

1. Open map window.

Initial Map Window

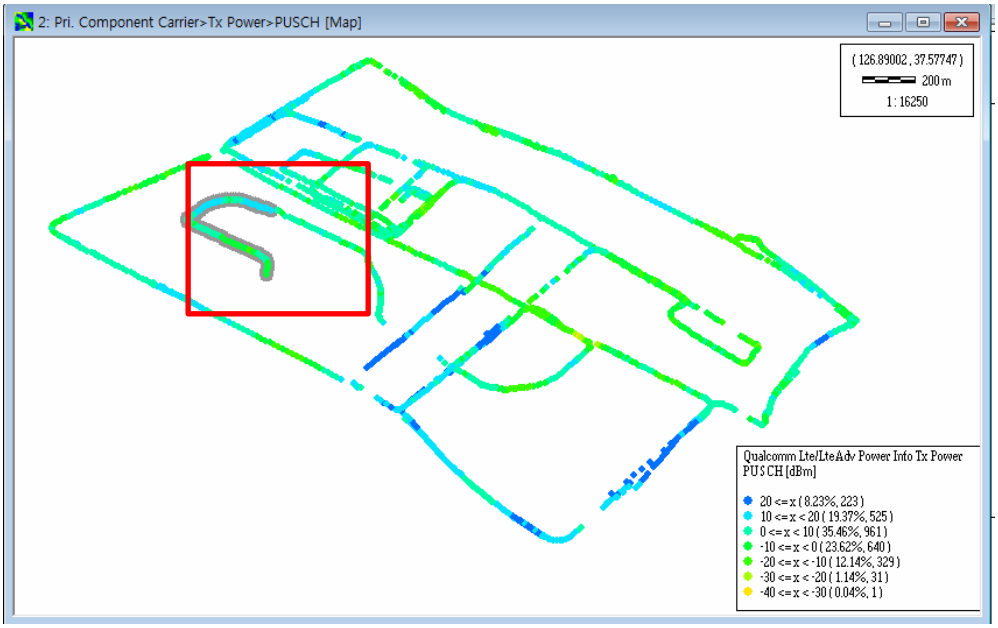

2. Select data to move using Selection Mode feature.

Data Selection
